One World Medical Network works in developing countries to enhance medical care and health teaching in developing countries. Our expert doctors work with telemedicine software to have permanent contact with doctors and mid-level health worker. We train mid-level health worker and doctors how to implement cervical screening in rural areas in low and middle-income countries and how to improve women's health. [Read More >](#)

Millennia2015 "Women actors of development for the global challenges" is a foresight research process created in 2007 by The Destree Institute. The key values of Millennia2015 are equality between women and men, respect for human rights, promotion of the human capital and of digital solidarity in order to empower women. [Read More >](#)

Mobile for Women in the Rural Area

Murrugarra Lady1, Stacy Gee2, Lorenzo Dieterich3, Jose Lopez1

- 1 Universidad Peruana Cayetano Heredia, IMT "AvH", Lima - Peru
- 2 Wowem, Australia
- 3 SmartAQP, Peru

The ubiquity and affordability of mobile presents us with an unparalleled opportunity to improve social and economic development and positively impact lives. However, to realise these benefits, women must not be left behind in the mobile revolution. Mobile technology is a powerful tool. It transcends geographies, cultures and socio-economic status and offers wide-ranging benefits to women and society. Mobile phones help women feel safer and more connected, save time and enable access to key services such mobile money and health information. Mobile phones are important tools for enhancing the lives of women in low- and middle-income countries. Mobile phones help women feel safer and more connected, save time and money, and access lifeenhancing services such as mobile money, or potential education and employment opportunities.

Area Rural and Urban

e-PREVENTION's: the project aims at (a) Reducing maternal mortality and maternal health complications through increased access to appropriate healthcare information via mobile voice and text messages in local dialects by pregnant women in rural communities; (b) Accelerating mobile phone ownership and use by at-risk pregnant women in rural communities to increase access to healthcare and empower rural communities. This includes education of women on the benefits of mobile phone ownership and use, as well as facilitating connections with local healthcare workers through 30 minutes of free airtime per month restricted to calling the assigned local health care facility; (c) Educating, training and capacity-building of community health workers using tablets preloaded with up-to-date training materials and content to improve maternal and child health in their communities.
