Acknowledgements

Dr. Kristie Holmes[1] and Dr. Véronique Thouvenot[2] wish to acknowledge the support provided by:

- Marie-Anne Delahaut and Millennia2015 team in Namur, Belgium;
- WeHealth scientific committee, Dr. Erna Surjadi and Dr. Cécile Méadel;
- WeHealth methodological committee, Najet Tenoutit and Marie Christine Desrues; and
- The network of 552 WeHealth members in 62 countries.

Special thanks are given to our partners for their continuous assistance since 2010 .

This list of selected references has been realized by Macy Alligood[3], under the supervision of Kristie Holmes and Véronique Thouvenot.

*We*Health Study 2010 – 2012[4]

The study is constituted by a two-year data collection process conducted by the *We*Health International Working Group, a network of **552 members** in **62 countries.** The data analysis applied is an original qualitative approach that employed the overall themes of Women, Health, and ICTs to generate action plans to close the gender and digital gaps, for women's empowerment, and to promote connectivity in their communities.

The vast majority of the information provided by *We*Health members acknowledges that the **access to and use of ICTs for health by women is a fundamental need and an essential factor contributing to their empowerment**. Non-economic benefits of these technologies include more rapid and effective communication in areas of conflict, during disasters, and to support women during their pregnancies.

The study is documented by 2.500 emails, 82 Skype conferences, 175 publications, 15 conferences attended by WeHealth members, 99 online interviews in 13 countries, collaborations with 27 organizations, 7 partners and 6 Millennia2015 communities in countries.

---
